

CAM Epicollect5 Quick Reference Guide

This serves as a quick reference to help with Planting and Monitoring Chestnut Trees using the Epicollect5 App.

The [Chestnuts Across Maine Project \(CAM\)](#) is an initiative beginning in 2023 of the Maine Chapter of [The American Chestnut Foundation \(TACF\)](#)

Table of Contents

Section 1. Quick Reference Guides

1. Purpose	4
2. Get the Epicollect5 App and CAM Projects	5
3. Record <u>GPS</u> Locations for Already Planted Tree	8
4. <u>PLANT</u> a New Seedling	11
5. Record Data on a <u>WILD KNOWN</u> Tree	15
6. Record Data on a <u>WILD UNKNOWN</u> Tree	18
7. Record Maintenance, Health Status, Access on <u>ONE</u> Tree	21
8. Record Maintenance done to <u>ALL</u> Trees at a site	24
9. Record a <u>RAIN</u> Event (HUB Captains)	27

Section 2. Practical Advice and Definitions

Section 3. CAM HUB Captain and Seedling Coordinator Information

1. Site and CAM Organizations	38
2. Volunteer Access to CAM Epicollect5	38
3. Figure 1: HUB Locations of Chestnuts Across Maine (CAM) Project	39
4. Table 2: Information Needed for New CAM Sites	40
5. Rain Events	41
6. How to look at Data Collected	41
7. Seedling Distribution	41
8. Current List of Contacts	42

SECTION 1. 1. PURPOSE

Thank you for your help in maintaining and monitoring [Chestnuts Across Maine \(CAM\)](#) chestnut trees! With your help, we will give the trees the best chance of survival and we will learn best approaches to growing chestnut trees in various environments across the state. When a blight resistant chestnut tree becomes available, with our knowledge and the procedures developed through our CAM project, we will have the know-how and resources necessary to strategically disperse and monitor the new trees throughout Maine.

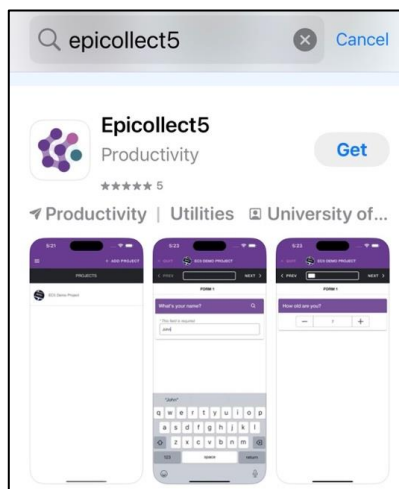

We developed an App to help you collect and report data in the field. Data from this App is exported to a SQL Database for CAM and WILD trees in Maine for long term use. Data collected on WILD trees are also exported to Dentatabase, TACF's database.

Click this link to [see where the CAM chestnut trees are located.](#)

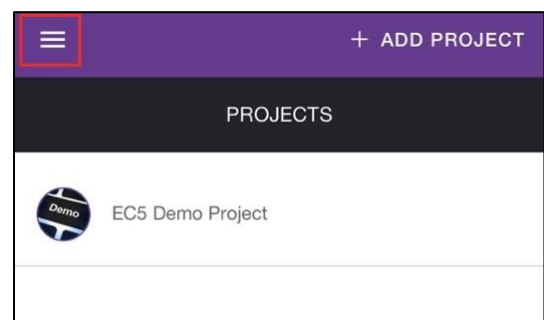

SECTION 1.2. GET THE EPICOLLECT5 APP AND CAM PROJECTS

Procedure

1. Give your HUB captain the email address you will be using for the Epicollect5 App. You will be given permission using this email address to access the CAM projects.
2. Download the Epicollect5 App from the App store
3. Select the 3 bars in upper left
4. Click 'Login' from the menu
5. Sign in or Login as desired
6. If you choose 'LOGIN WITH EMAIL', check your email for a code from Epicollect5. Enter the code.
7. Enter the code into the App and hit 'LOGIN'.
8. Click on '+ADD PROJECT' in upper right.
9. Type 'CAM Tree' in the search window. You will see two projects available. Click 'CAM Tree Maintenance' to plant and monitor trees. Also, click 'CAM Tree Rain Event' if you are a HUB Captain.
10. Your project list now includes the CAM project(s)

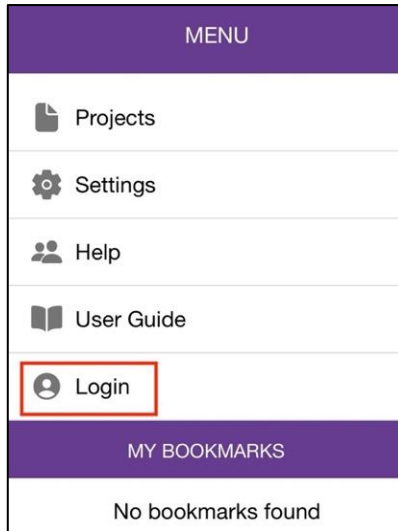

2. Get App from Appstore

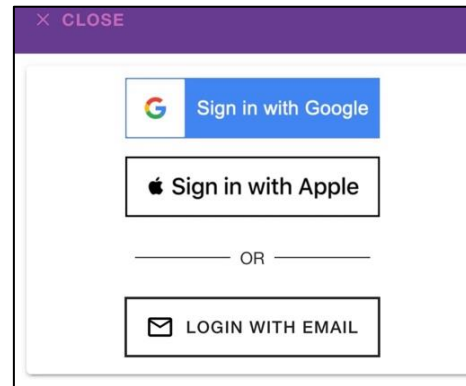

3. Select the 3 bars in the upper left

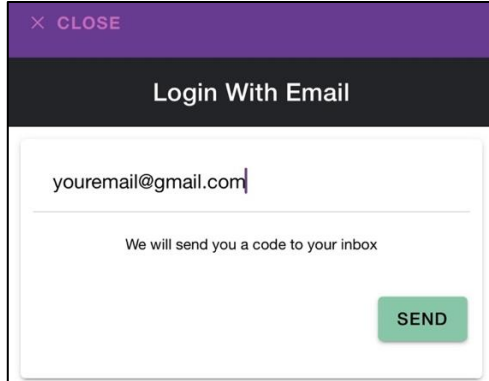

SECTION 1.2. CONT.

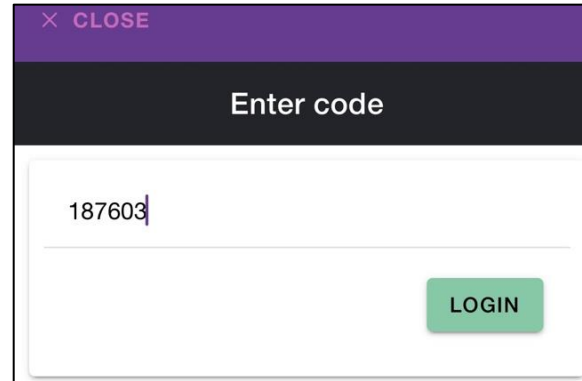

4. Choose 'Login'

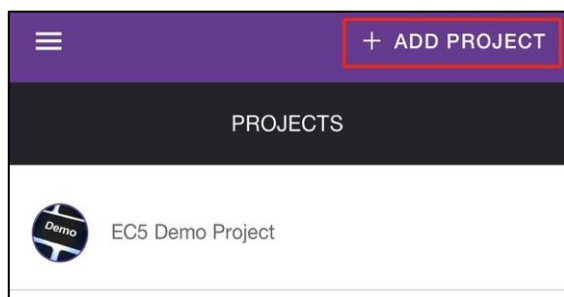

5. 'Sign in' or 'LOGIN'

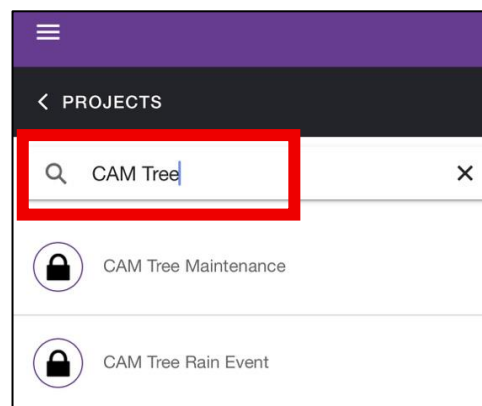

1. If you choose 'LOGIN WITH EMAIL', check your email for a code from Epicollect5.

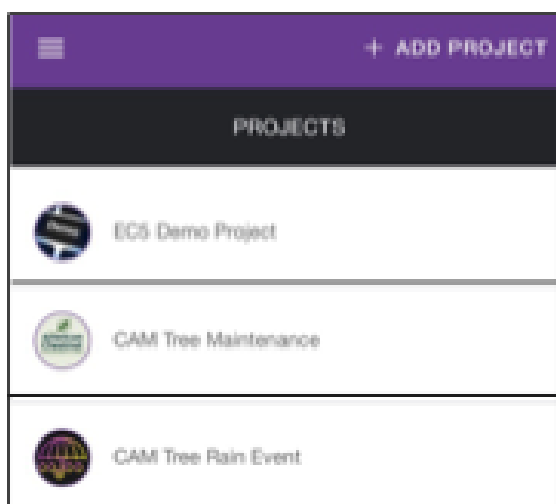

7. Enter the code into the App and hit 'LOGIN'.

8. Click '+ ADD PROJECT' in upper right.

9. Type 'CAM Tree' in the search window. You will see two projects available. Click 'CAM Tree Maintenance' to plant and monitor trees. Also, click 'CAM Tree Rain Event' if you are a HUB Captain.

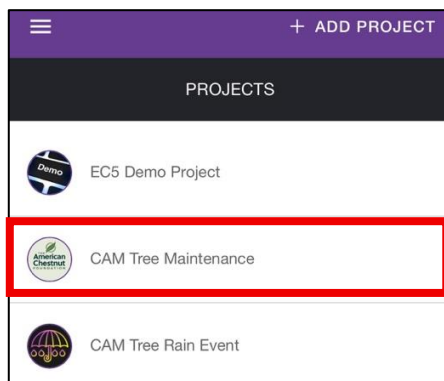

10. Your Project list now includes the CAM project(s).

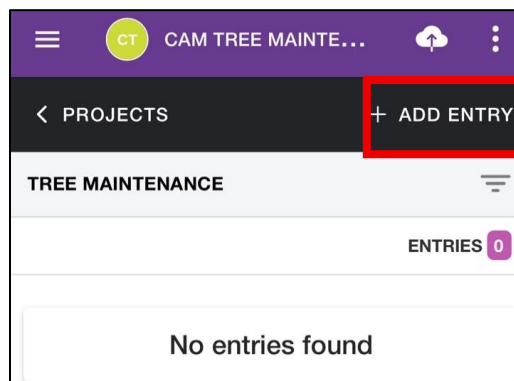

SECTION 1.3. RECORD GPS LOCATIONS FOR ALREADY PLANTED TREES

Procedure

1. Click 'CAM Tree Maintenance' from PROJECTS window
2. Click '+ ADD ENTRY'
3. Click "Pick Possible Answer' for menu of sites, choose yours, then click 'NEXT'
4. Click 'GPS'. Click 'NEXT' to move to the next screen
5. Enter Tree number, then click 'NEXT'
6. With your phone near the tree, click 'UPDATE LOCATION' button, then click 'NEXT'
7. Add additional info, click 'NEXT'
8. Click SAVE ENTRY, then click 'NEXT'
9. At the end of the day, click 'UPLOAD' data. Your data has now been submitted to the database

1. Click 'CAM Tree Maintenance'

2. Select '+ ADD ENTRY'

SECTION 1.4. PLANT A NEW SEEDLING

Procedure

1. Click 'CAM Tree Maintenance' from PROJECTS window
2. Click '+ ADD ENTRY'
3. Click "Pick Possible Answer' for menu of sites, click 'NEXT' to move to the next screen
4. Click 'PLANT', then click 'NEXT'
5. Enter Tree number, then click 'NEXT'
6. You will then be prompted for the Mother and Father of the tree. Click "Pick Possible Answer' for menu of parents. If 'Unknown' choose 'Unknown'. If 'Other' Choose 'Other'. Click 'NEXT' to move to the next screen.
7. With your phone near tree and click 'UPDATE LOCATION', then click 'NEXT'
8. Continue following the dialog as it captures additional information using 'NEXT' to move to the next screens, please take a picture of the tree tag.
9. You will be given the opportunity to 'TAKE' a picture. It is highly recommended to take a picture of the tree tag. This documents the parents and tree number of the tree.
10. For a second photo, consider taking a picture of the tree itself if there is anything remarkable or unusual about the seedling.
11. At the end of the dialog, click 'SAVE ENTRY', then click 'NEXT'
12. At the end of the day, click 'UPLOAD' data. Your data has now been submitted to the database.

1. Click 'CAM Tree Maintenance' from PROJECTS window

2. Click '+ADD ENTRY'

SECTION 1.4. CONT.

The screenshot shows the 'CAM TREE MAINTENANCE' screen. At the top, there is a purple header with a 'QUIT' button and a 'CAM TREE MA...' title. Below the header is a navigation bar with '< PREV', a search bar, and a 'NEXT >' button. The main content area is titled 'TREE MAINTENANCE' and contains a 'Site' dropdown menu. A red box highlights the 'NEXT >' button. The dropdown menu is open, showing a green bar with the text 'Pick possible answer' and a downward arrow.

3. Click “Pick Possible Answer” for menu of sites, choose yours, then click ‘NEXT’

The screenshot shows the 'CAM TREE MAINTENANCE' screen. At the top, there is a purple header with a 'QUIT' button and a 'CAM TREE MA...' title. Below the header is a navigation bar with '< PREV', a search bar, and a 'NEXT >' button. The main content area is titled 'TREE MAINTENANCE' and contains a section titled 'To speed Data Entry, please tell us what this Data Entry record is for...'. Below this section are four radio button options: 'ALL - Water, Weed, Fertilize, or Prune ***ALL*** the trees at a Site', 'ONE - Water. Weed. Fertilize. Prune. and/or Health Report on ***ONE*** tree', 'GPS - Collect Tree Location data for an existing tree', and 'PLANT - Planting a new tree'. The 'PLANT' option is selected, indicated by a green dot.

4. Click ‘PLANT’, then click ‘NEXT’

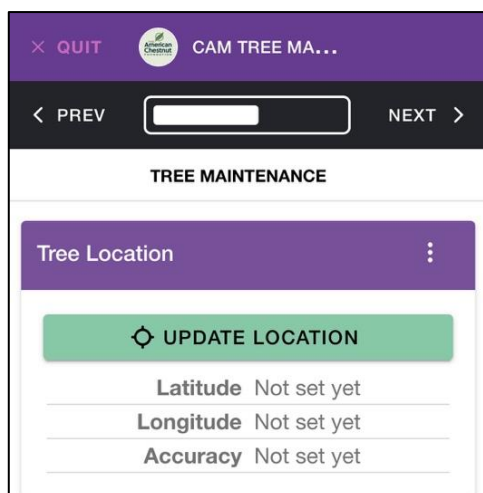

The screenshot shows the 'CAM TREE MAINTENANCE' screen. At the top, there is a purple header with a 'QUIT' button and a 'CAM TREE MA...' title. Below the header is a navigation bar with '< PREV', a search bar, and a 'NEXT >' button. The main content area is titled 'TREE MAINTENANCE' and contains a section titled 'Tree Number (three digits required)'. Below this section is a text input field with the value '018' and a blue border. A red box highlights the 'NEXT >' button. The input field has a pattern hint: 'Pattern: ^\d{3}\$'.

5. Enter tree number, then click ‘NEXT’

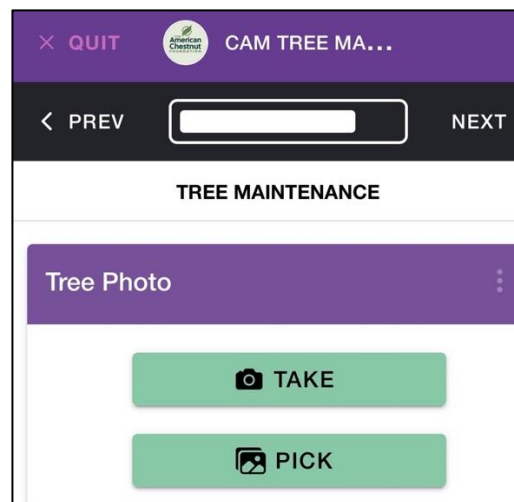

The screenshot shows the 'CAM TREE MAINTENANCE' screen. At the top, there is a purple header with a 'QUIT' button and a 'CAM TREE MA...' title. Below the header is a navigation bar with '< PREV', a search bar, and a 'NEXT >' button. The main content area is titled 'TREE MAINTENANCE' and contains a section titled 'Mother Tree'. Below this section is a dropdown menu with a green bar and the text 'Pick possible answer' and a downward arrow.

6. Click “Pick Possible Answer” for menu of parents. If ‘Unknown’ choose ‘Unknown’. If ‘Other’ Choose ‘Other’. Click ‘NEXT’ to move to the next screen.

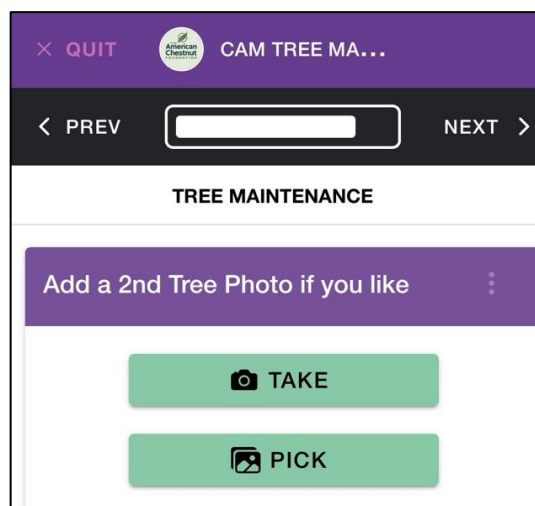

SECTION 1.4. CONT.

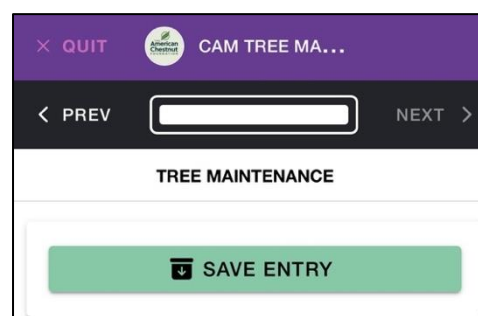

7. With your phone near tree and click 'UPDATE LOCATION', then click 'NEXT'

8. You will be given the opportunity to 'TAKE' a picture. It is highly recommended to take a picture of the tree tag. This documents the parents and tree number of the tree.

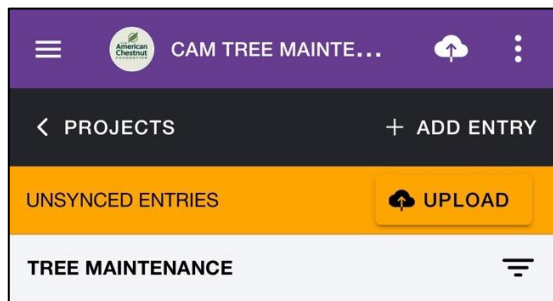

10. For a second photo, consider taking a picture of the tree itself, or a map of the site, or if there is anything remarkable or unusual about the seedling.

11. At the end of the dialog, click 'SAVE ENTRY'

SECTION 1.4. CONT.

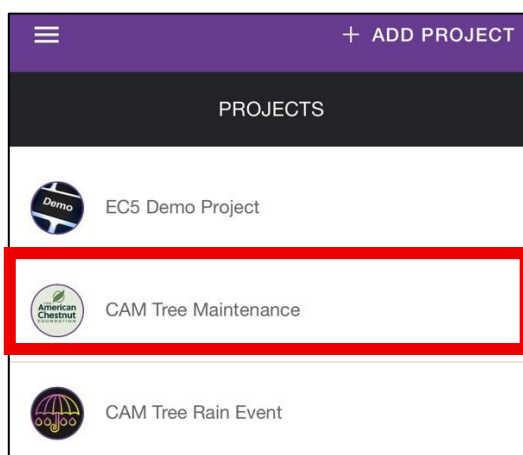

12. At the end of the day, click 'UPLOAD' data. Your data has now been submitted to the database.

Contact Kim Colson 207-595-4533, kimcolson.sebago@gmail.com for help/ report errors.

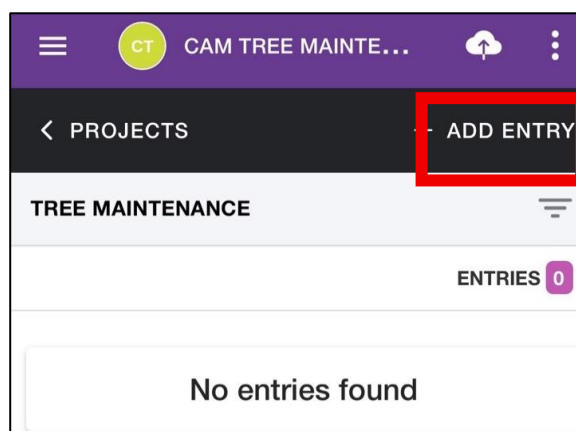

SECTION 1.5. RECORD DATA ON WILD TREE: KNOWN TREE

Procedure

1. Click 'CAM Tree Maintenance' from PROJECTS window
2. Click '+ ADD ENTRY'
3. Click "Pick Possible Answer' for menu of sites, click 'NEXT'
4. For a **Known Wild Tree**, click 'WildTACF',
5. With your phone near tree and click 'UPDATE LOCATION', then click 'NEXT'
6. For **Known Wild Trees** (WildTACF) Enter the short code Tree number in format ME-XX000. This is the TACF DENTATABASE short code, where ME is the state, XX is the town code, followed by the 3-digit tree number, then click 'NEXT'
7. Click the best description of the path leading to the tree, click 'NEXT'
8. Continue the dialog with entering your best answers for access and overall health, click 'NEXT' to move to the next screens
9. If you wish to provide additional info on the tree (Health, Dimensions, Flowering, Access) click 'Continue with Tree Measurements'. If you only want to report maintenance (watering) click 'Skip to Maintenance'. The dialogs will ask you for the additional information, always click 'NEXT' to move to the next screen.
10. At the end of the dialog, click 'SAVE ENTRY', then click 'NEXT'
11. At the end of the day, click 'UPLOAD' data. Your data has now been submitted to the database.

1. Click 'CAM Tree Maintenance'

2. Click '+ADD ENTRY'

SECTION 1.5. CONT.

The screenshot shows the 'TREE MAINTENANCE' screen. At the top, there is a purple header with a 'QUIT' button and a 'CAM TREE MA...' title. Below the header is a navigation bar with 'PREV' and 'NEXT' buttons. The main content area is titled 'TREE MAINTENANCE'. Underneath, there is a purple box labeled 'Site'. Below this, a green box contains the text 'Pick possible answer' with a downward arrow. A red asterisk and the text '* This field is required' are visible above the green box.

3. Click "Pick Possible Answer" for menu of sites, choose yours, then click 'NEXT'

The screenshot shows the 'TREE MAINTENANCE' screen. At the top, there is a purple header with a 'QUIT' button and a 'CAM TREE MA...' title. Below the header is a navigation bar with 'PREV' and 'NEXT' buttons. The main content area is titled 'TREE MAINTENANCE'. Underneath, there is a purple box labeled 'CAM Org - Site'. Below this, a green box contains the text 'WildTACF - Wild trees known to TACF' with a downward arrow. A red asterisk and the text '* This field is required' are visible above the green box. The green box is highlighted with a red border.

4. For a **Known Wild Tree** click 'WildTACF', then click 'NEXT'

The screenshot shows the 'TREE MAINTENANCE' screen. At the top, there is a purple header with a 'QUIT' button and a 'CAM TREE MA...' title. 5. SITE View: Click on the 'SITE'(s) that you wish to report on. Multiple HUBs or SITES may be chosen, click 'NEXT'

SAVE ENTRY

6. At the end of the dialog, click 'SAVE ENTRY', click 'NEXT'

UPLOAD

7. At the end of the day, click 'UPLOAD' data.

SECTION 2. 1. VOLUNTEER BEST PRACTICES

The App works best if you enable location services. This makes it possible to capture coordinates of trees you plant. Suggestion setting for location services is 'While Using'.

If possible, please record data when you are at the chestnut tree. That way, we know the actual date that you performed maintenance activities. The App we have developed works off-line automatically. Data can be uploaded at a later time when you have good internet or cellular service.

The tree sites are listed as CAM Org – Site, where the CAM Org is an abbreviation for the organization that owns or is responsible for the property and the Site is the specific property within that organization.

Example CAM Org Abbreviations used:

BBA = Beaver Brook Association

HSS = Hebron Station School

LELT = Loon Echo Land Trust

SLSP = Sebago Lake State Park

PVT = Private Land

TEST = Test entry, Use as a practice entry

For practice entries for wild trees use the short code ZZ-ZZ001.

We update the App regularly. You will always have the latest version simply by returning to the Main Epicollect5 Project Screen after entering data. Your phone will automatically reload the updated form as you enter the project.

Photos are recommended of the identity tag of the tree at planting and as a yearly documentation of the tree's progress or difficulties.

If you make an error in a data submission, just submit a new entry rather than editing your previous entry. We will keep the latest entry.

Please let the HELP Coordinator know if you have any difficulties or questions with the App. Thank you.

SECTION 2. 2. DEFINITIONS AND PURPOSE

A. GPS LOCATION

Collecting the Tree Location is particularly useful if the tag is lost or the location was not reported earlier and a new volunteer needs to find the tree. Click this link to [see where CAM chestnut trees are located.](#)

B. MAINTENANCE ACTIONS

Watering trees upon planting is highly recommended. The other actions are typically not conducted on planting but are part of the Maintenance activities. When conducting Maintenance activities **Weed** as needed, and **Fertilize** when trained and instructed to do so. We avoid **Pruning** to limit the possibility of blight that often enters through open wounds. If Pruning is needed, we will train and instruct you to do so.

C. PLANTING METHODS, TUBES and FENCE

During our CAM plantings we are testing various planting methods to establish a method that gives the best chance of tree survival. Options: Short Tube (< or = 2 ft), Tall Tube (> 2 ft), No Tube

D. TREE TAG

The format of tree identification is the CAM organization followed by the tree number. For example, LELT018 is tree #18 on LELT property. Provide the tree number (using all three digits of the tree number). If it is tree '18', enter the number as '018'.

Figure 1. Tree tag showing parentage, number and year of planting

The tree number is found on the metal tag attached to the tree just above the year planted. The ID tag above shows the year planted (on the right, i.e. 2025) and the tree number 18. It also shows where the nut that produced the plant came from (i.e. a Perkins x Fort Point tree #1 cross, where the first entry is the female blossom and the second entry is the catkin used to pollinate the blossom).

SECTION 2. 2. CONT.

E. HEALTH OF TREE

Some health data is subjective and some can be measured. With time seeing enough trees you will become confident with answering subjective questions. Just use your best judgement as you develop experience.

Report whether the tree's general condition is perceived as 'Good', 'Poor' or 'Dead'. Please note, that chestnut trees are strongly resilient underground once their tap root is established. As a result, we don't pull out a chestnut tree until it has been reported as dead for an extended amount of time. If the tree looks dead, pick that entry. If the tree looks good, select 'Good'. If a tree has some green showing (leaves or bark) but looks poor (chewed up or brown shriveled leaves) choose 'Poor'.

Good = Healthy looking leaves, bark looks good

Poor = Leaves are chewed up, tree looks like it could be dying, tree is misshapen, limbs or leader broken, tree has orange spots on it.

Dead = Leaves shriveled up, scratching the bark with your fingernail shows no green and only dead wood under the outer layer of bark.

BLIGHT

Blight appears as orange spots and typically is near bark wounds. Refer to pictures in TACF Fact Sheet 'Identifying Blight Cankers V.1, Feb 2016'.

Typical blight canker on a young tree (Figure 1). The blight fungus is bright orange, especially when wet and/or actively fruiting (Figure 2). Water sprouts are another sign that a canker is present, even if the canker itself may be difficult to see. This is especially useful on taller trees or those with mature bark (Figure 3).

Figure 2. Blight description according to TACF Fact Sheet V.1 Feb 2016.

SECTION 2. 2. CONT.

TREE FORM

Tree form is somewhat subjective. If the tree has a strong leader, report it as 'Straight'. If it does not have a strong leader and has different branches instead, report it as 'Branching'. See the following image for an example of a 'Straight' chestnut tree.

Figure 3. Chestnut tree with strong leader (i.e. straight tree)

Figure 4. Seedling with below ground branching (i.e. branched tree).

Figure 5. Seedling with above and below ground branching (i.e. branched tree).

SECTION 2. 2. CONT.

STUMP SPROUTING

Stump Sprouting is indicative of a tree that is under stress. Chestnut trees that have lost their main stem often show stump sprouting. This often looks like a large number of suckers coming out of the ground.

Figure 6. Suckers indicate tree is under stress.

BLOSSOMS AND CATKINS

American chestnut trees may start to flower as early as 3 years old. They typically flower between mid-June to mid-July and each tree could have both male (catkins) and female flowers (blossoms). Catkins flower first, often a couple weeks before the blossoms. They are long, bright white and easily seen. Blossoms are very small, green and often at the top of the tree. With practice you will be able to find them. The use of binoculars will help you find the blossoms.

SECTION 2. 2. CONT.

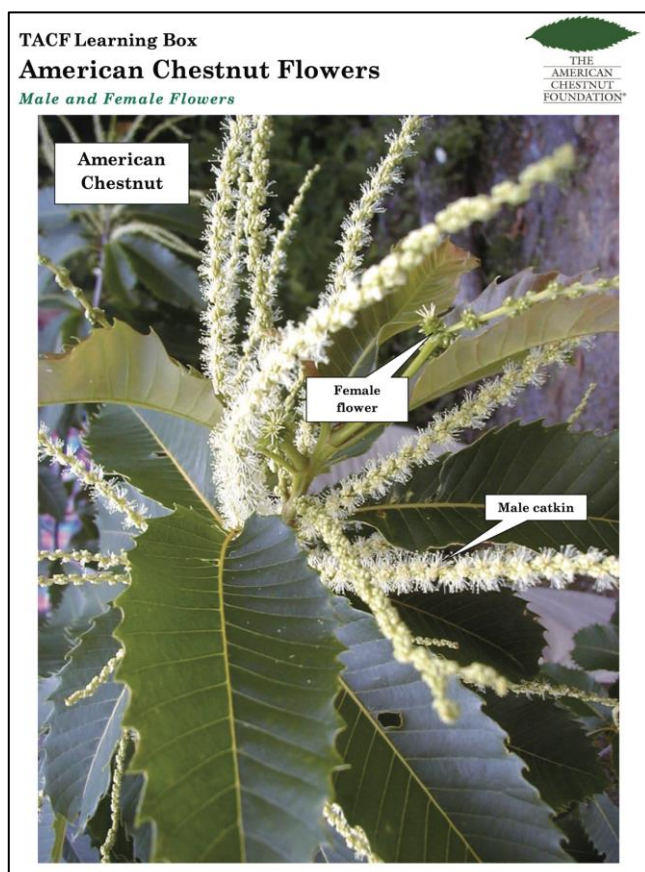

Figure 7. Male catkins are long and easy to see.

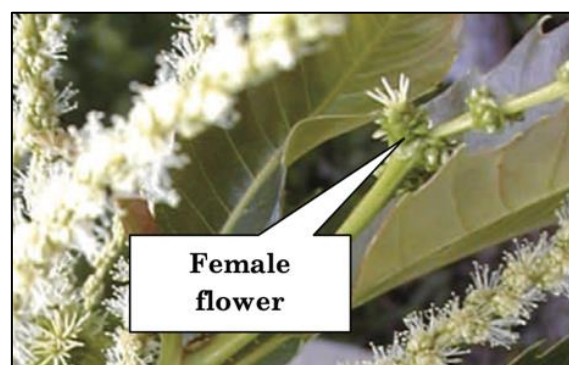

Figure 8. Female blossoms are small and green. They are typically on the top of the tree.

NUTS and BURRS

NUTS (Burrs Present). Once the blossoms are pollinated, burrs are produced that typically contain 3 nuts inside. They are typically ready to harvest in mid to late September.

Green burrs

Mature Burrs

Harvested Nuts

SECTION 2. 2. CONT.

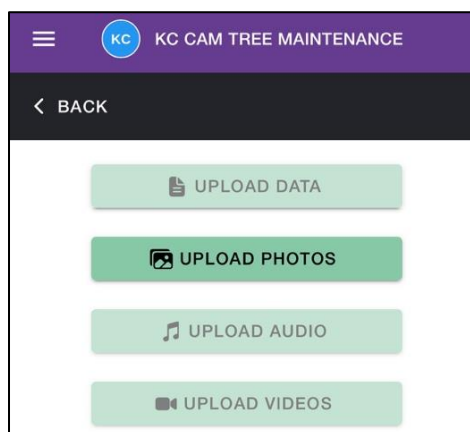

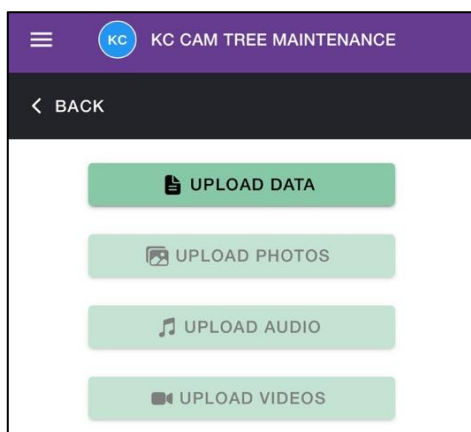

MEASUREMENTS OF TREES

In **Dimensions**, please report the Height of the tree in Feet. Note: there must be a number in the “Height Feet” field. If the tree is less than 1 foot high, enter ‘0’ (zero). If you are measuring a small tree, reporting “Inches” gives you the opportunity to appreciate how quickly a Chestnut tree can grow.

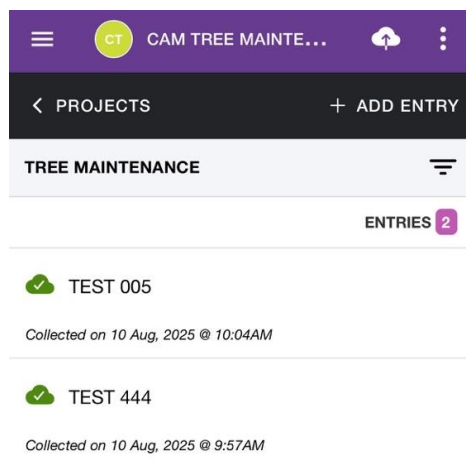

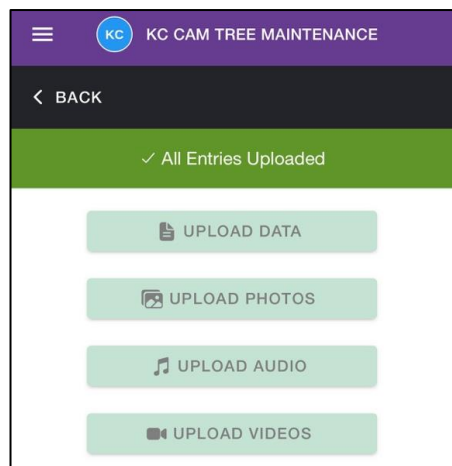

Formally, the tree **Diameter** is measured at 4.5ft from the ground in inches. On small trees (less than 4.5 ft high), knowing how big the stem is can help us evaluate planting methods. For small trees, measure the diameter at 1 foot off the ground if possible. This may be a small number (0.25 or even 0.1 inches!) when the tree is young.

UPLOAD DATA

Click ‘Save Entry’ to save your information to your tree entries. Warning – The data is not yet submitted to the database! This Saves the Entry ONLY to your phone. You will need to upload the Data (AND PHOTOS) to the server once you have a good cellular or Wi-Fi Connection. Click the ‘UPLOAD’ button in the Orange ‘UNSYNCHED ENTRIES’ header. UPLOAD DATA sends only data to database, UPLOAD PHOTOS sends photos to the database. Once the upload is complete, the message ‘All Entries Uploaded’ will appear. Click the ‘< Back’ button to return to the project main screen. Once the upload is complete there will be a green cloud with a checkbox next to your newly added entries. You have successfully added data on the trees! Thank you for your contribution in planting a CAM American chestnut tree!

WILD TREE INFORMATION

Short codes are a unique identifier for a specific wild tree used in the TACF database, Dentatabase. The format of the short code for trees in Maine is ME-XX-000, where XX stands for the town where the tree is located. The Town Codes are shown in Table 1.

SECTION 2. 2. CONT.

Table 1: Town Codes for Wild Trees in Maine

Town Code	City/Town	Town Code	City/Town
AC	Acton	HB	Hebron
AB	Albion	HR	Hiram
AN	Andover	LG	La Grange
AT	Atkinson	LD	Leeds
AU	Auburn	LK	Lincoln
BB	Boothbay	LF	Livermore Falls
BH	Bowdoinham	LL	Lovell
BD	Bradford	MM	Monmouth
BM	Bremen	NW	N. Waterford
BR	Bridgton	NA	Naples

FA	Farmington	WY	Wayne
FR	Freedom	WX	West Buxton
FP	Freeport	WD	Whitefield
FG	Fryeburg	YA	Yarmouth
GA	Gardiner		

SECTION 3. CAM HUB CAPTAIN AND SEEDLING COORDINATOR INFORMATION

1. SITE AND CAM ORGANIZATIONS

Information Needed for Monitoring Chestnut Trees with Epicollect5 App on PRIVATE LAND

Regional volunteers (HUB Captains) assigned to particular regions (HUBs, See Figure 1 below) of the state of Maine will benefit from features in the Epicollect5 Field App. To get started with the App, information on your CAM sites and the Cam Organizations is needed. **Please submit the information in Table 2 for each of the NEW sites you are working with to the HELP Coordinator.**

Information Needed for Monitoring Chestnut Trees with Epicollect5 App on PRIVATE LAND

For Monitoring Trees on Private Land (i.e. not CAM Sites and on private property) we will assign a site name using the format 'PVT XXX – PVT YYYYYYYYYY', where 'XXX' is the owner's three initials and 'YYYYYYYYYYY' is a short description of the location. For example, 'PVT KLC – PVT KLC Log Landing' defines private property where chestnut trees are planted. **Note: these trees will be on the chestnut tree map visible to all users.** To establish a monitoring site on private land the following information is needed.

- Owners Name
- Owners Email Address
- Owners Cell Phone number (so we can help you use the app on location if needed)
- Owners Initials (3 initials)
- Site Name (i.e. Log Landing)
- Site location (town)
- HUB Region (i.e. Bridgton)

2. VOLUNTEER ACCESS TO CAM EPICOLLECT5

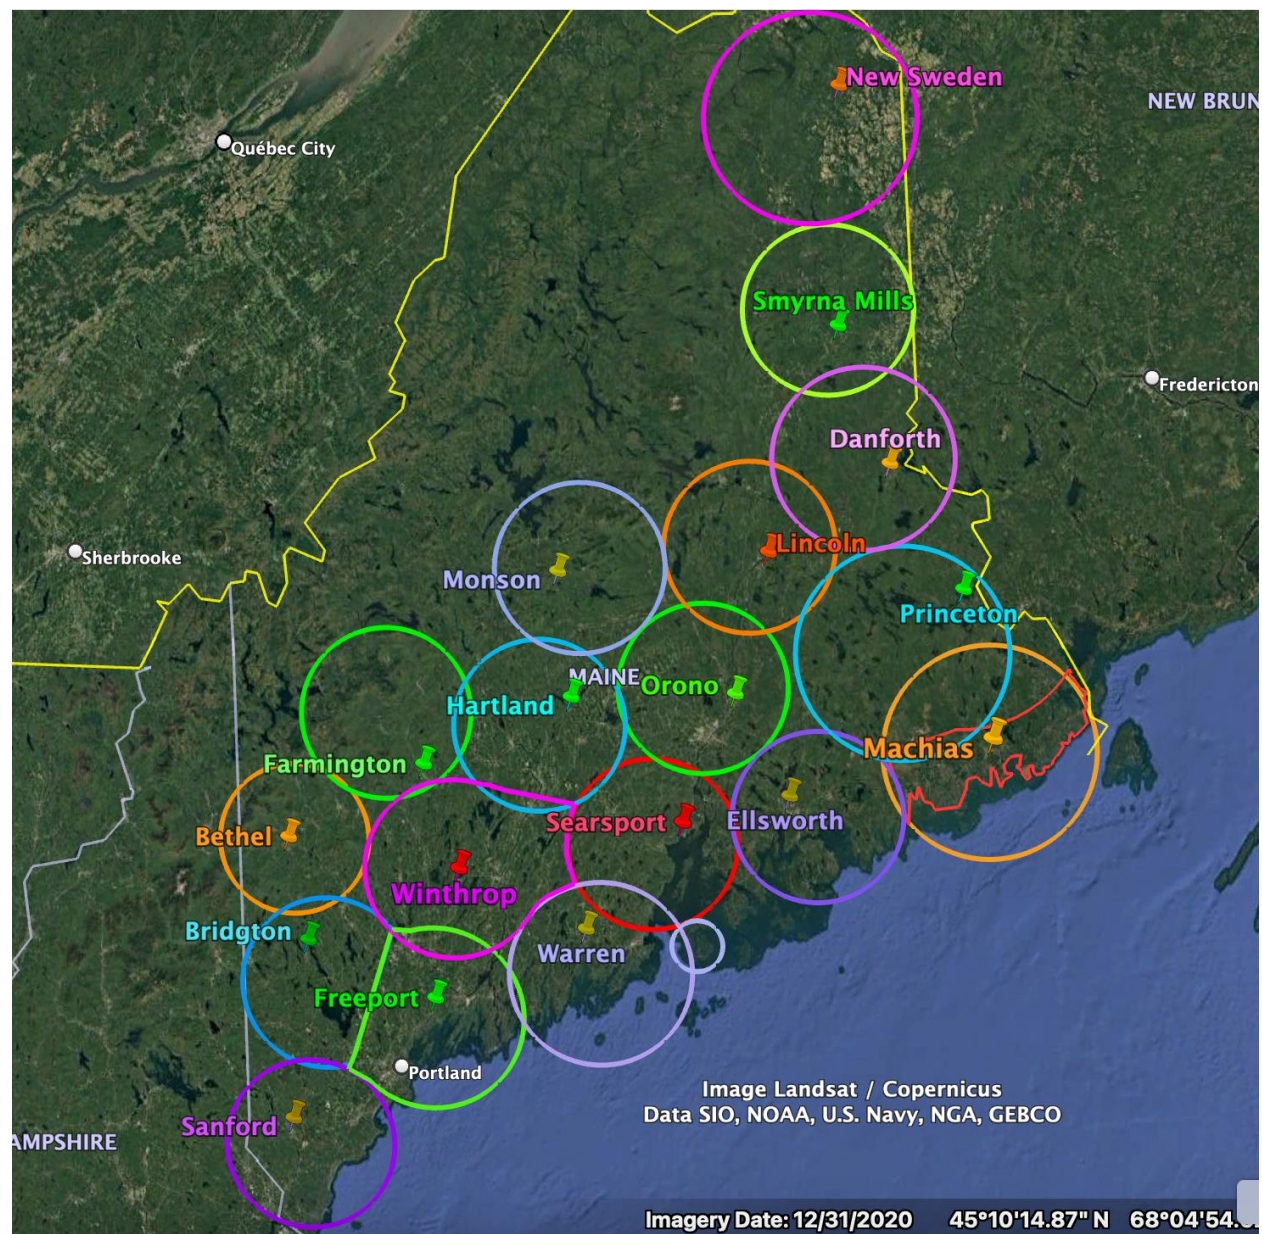

Information needed for new volunteers using our CAM EPICOLLECT5 projects include:

- Volunteer Name
- Volunteer Email Address
- Volunteer's Town of residence (helps us know where you may be able to volunteer)
- Volunteer's cellphone number (for support)

Submit this information to the HELP Coordinator.

CAM Organization (i.e. Loon Echo Land Trust):

CAM Organization Abbreviation (i.e. LElt):

CAM Organization Contact Person Name:

CAM Organization Contact Person Email:

CAM Organization Contact Person Cell Phone Number:

CAM Organization Contact Person Home Town:

Site Name (i.e. Mayberry Hill):

Site Town (i.e. Casco):

Site Location (parking address):

Site Contact Person Name:

Site Contact Person Email:

Site Contact Person Cell Phone Number:

Site Contact Person Home Town:

(Optional) Who will be the Primary Caretaker of all the trees at the Site...

Primary Caretaker Name:

Primary Caretaker Email:

Primary Caretaker Cell Phone Number:

Primary Caretaker Home Town:

SECTION 3. CONT.

3. RAIN EVENTS

Critical to the success of seedling chestnut trees is adequate amounts of water. For this reason, volunteers can record the watering that they provide to each tree using the CAM Tree Maintenance Project. Additionally, a HUB Captain (or their designee) can record natural Rain Events in their HUB. This information helps HUB Captains identify trees that likely have not had an adequate amount of water. With this information, the HUB Captain can take action to make sure the trees at risk are watered.

Please note, a Rain Event in the CAM Tree Spreadsheet is greater than 0.25 inches of rain.

4. HOW TO LOOK AT DATA COLLECTED

Each user has a list of the entries that they made in Epicollect5. Those entries can be viewed from the Epicollect5 'Tree Maintenance' screen. For viewing more data, currently you must reach out to the HELP Coordinator. We are currently seeking a volunteer to assist us with making a website to access information from the CAM database.

Click this link to [see where the CAM chestnut trees are located.](#)

SECTION 3. 5. SEEDLING DISTRIBUTION

Seedling distribution involves significant work and many hand involved. To maintain consistency in labeling of seedlings and documentation of the seed types and planting locations, we have implemented this procedure:

1. New CAM Sites are registered for use in the Epicollect5 App. (Responsibility: Volunteer Coordinator)
2. The spreadsheet named 'ParentList4CAM Plantings.xlsx' is updated to ADD any new seed sources not already on the list. (Responsibility: Seedling Coordinator)
3. The first Column (A) of the spreadsheet shows the name that will be used on the seedling's tag. (Responsibility: Seedling Coordinator)
4. Updated list is sent to HELP Coordinator (Responsibility: Seedling Coordinator).
5. HELP Coordinator works with Epicollect5 App administrator implement the changes into the App (Responsibility: HELP Coordinator).
6. Tags will be written Mother x Father (horizontally) and the year of seedling planting (on right, vertically). (Responsibility: Seedling Coordinator)

7. The Tags are added to the seedlings. (Responsibility: Seedling Coordinator)
8. The seedlings and planting kits are distributed to the HUB captains. (Responsibility: Volunteer Coordinator)
9. The HUB captains add the tree number onto the Tag prior to planting the seedling. The HUB Captains will sequentially number the seedlings according to the CAMOrg. For example, if LEFT already has 40 CAM trees, the next CAM tree planted at the site will be LEFT041. If a tree dies, a tree number is NOT reused. (Responsibility: HUB Captains)
10. When the tree is planted, the volunteer will be prompted by the Epicollect5 App to enter the Mother and Father of the tree. (Responsibility: HUB Captains)

SECTION 3. 6. CURRENT LIST OF CONTACTS

HELP Coordinator: Kim Colson, kimcolson.sebago@gmail.com, 207-595-4533.

HUB Captains: contact Volunteer Coordinator for current list

Seedling Coordinator: Mark McCollough. Markmccollough25@gmail.com, 207-881-3889

Volunteer Coordinator: Eva Butler, eva.maineACF@gmail.com, 916-719-4854

CAM Database Administrators Ken Rosenberry, ken.rosenberry@gmail.com, 814-234-8686 and Jack Williams, jckwillms95@gmail.com, 847-651-2073
